Containers have been with us for as long as human civilization. At Takemoto Packaging, we see ourselves as proud keepers of a timeless cultural tradition that enriches human lives. We also see ourselves as innovators, challenging ourselves to lead that tradition into a better future for our customers and end users.

As a pioneer in 'standard' packaging, our focus is on the quality, functionality and individuality that our customers demand in their containers, thereby creating standout value. Nothing is more rewarding to us than helping bring our customers' concepts to life.

Your product, our package. Together the possibilities are endless.

Emiko Takemoto
President

Let us help you standout.

Your product, our package. Together the possibilities are endless.

In our more than 65 years of operation, Takemoto Packaging has grown to become one of Japan's leading container packaging producers and the top provider of 'standard' packaging.

Throughout our history we have been committed to mastering our craft, constantly improving our skills. We challenge ourselves always to be innovative and original in ways to do things. And we keep our customers' needs and our social responsibilities in clear view.

What really sets us apart is our mold-development capability. By our reckoning, Takemoto Packaging owns hundreds molds than any other company in the world and we add hundreds of new molds each year – many of them designed and manufactured in-house. This allows us to offer exceptional consistency of design and quality. Our container line-up is a carefully conceived system of designs that works in perfect harmony with our range of compatible caps and accessories.

We offer two distinct paths to find the right component for your needs:
Standard & Bespoke.

Choose the best way to bring your vision to life. We provide a uniquely flexible and efficient way to create packaging that is highly individualized in design, superior in functionality and of exceptional quality and reliability.

Pathway No.1

'Standard'

You choose, we'll deliver.

'Standard' packaging is based on a simple idea: give customers the advantages of an individualized packaging solution without the high cost and months-long development times needed to create new packaging from scratch with a custom-produced mold. For the most basic requirements, we stock containers in various sizes and shapes that are available for immediate delivery. But the reality is that our customers' needs are so diverse that it is impractical to maintain stocks for every possibility. So we produce standard containers on demand using one of over 3,400 molds that we have currently in use around the world. This solution provides a high-quality package while minimizing manufacturing costs and lead time.

Pathway No.2

‘Bespoke’

Let's create unique.

Customers who require a highly specific shape, design or function can work with us to create made-to-order containers starting from product design and custom mold fabrication. To control costs, custom containers can be combined with existing caps or accessories. In addition, our library of existing preforms for ISBM bottles makes it possible to create unique custom designs with only the development of a blow mold required.

The Container Experts

A great deal of expertise underlies all of our container-development solutions. All containers require top-level manufacturing capabilities in blow molding, injection molding, injection stretch blow molding, tube extrusion, aluminum molding, pump manufacture and more.

Quality Assurance

The Pursuit Of Perfection

Our commitment is to deliver products of the highest quality to our customers. We work to the highest specifications with thorough process controls at every stage, from raw material acquisition to delivery of final products. All products are introduced only after undergoing a rigorous regime of functional testing to ensure that they meet specifications for durability, strength and performance in extremes of temperature and pressure. Our raw materials and final products meet all the standards demanded by our customers.

Research & Development

Leading Through Innovation

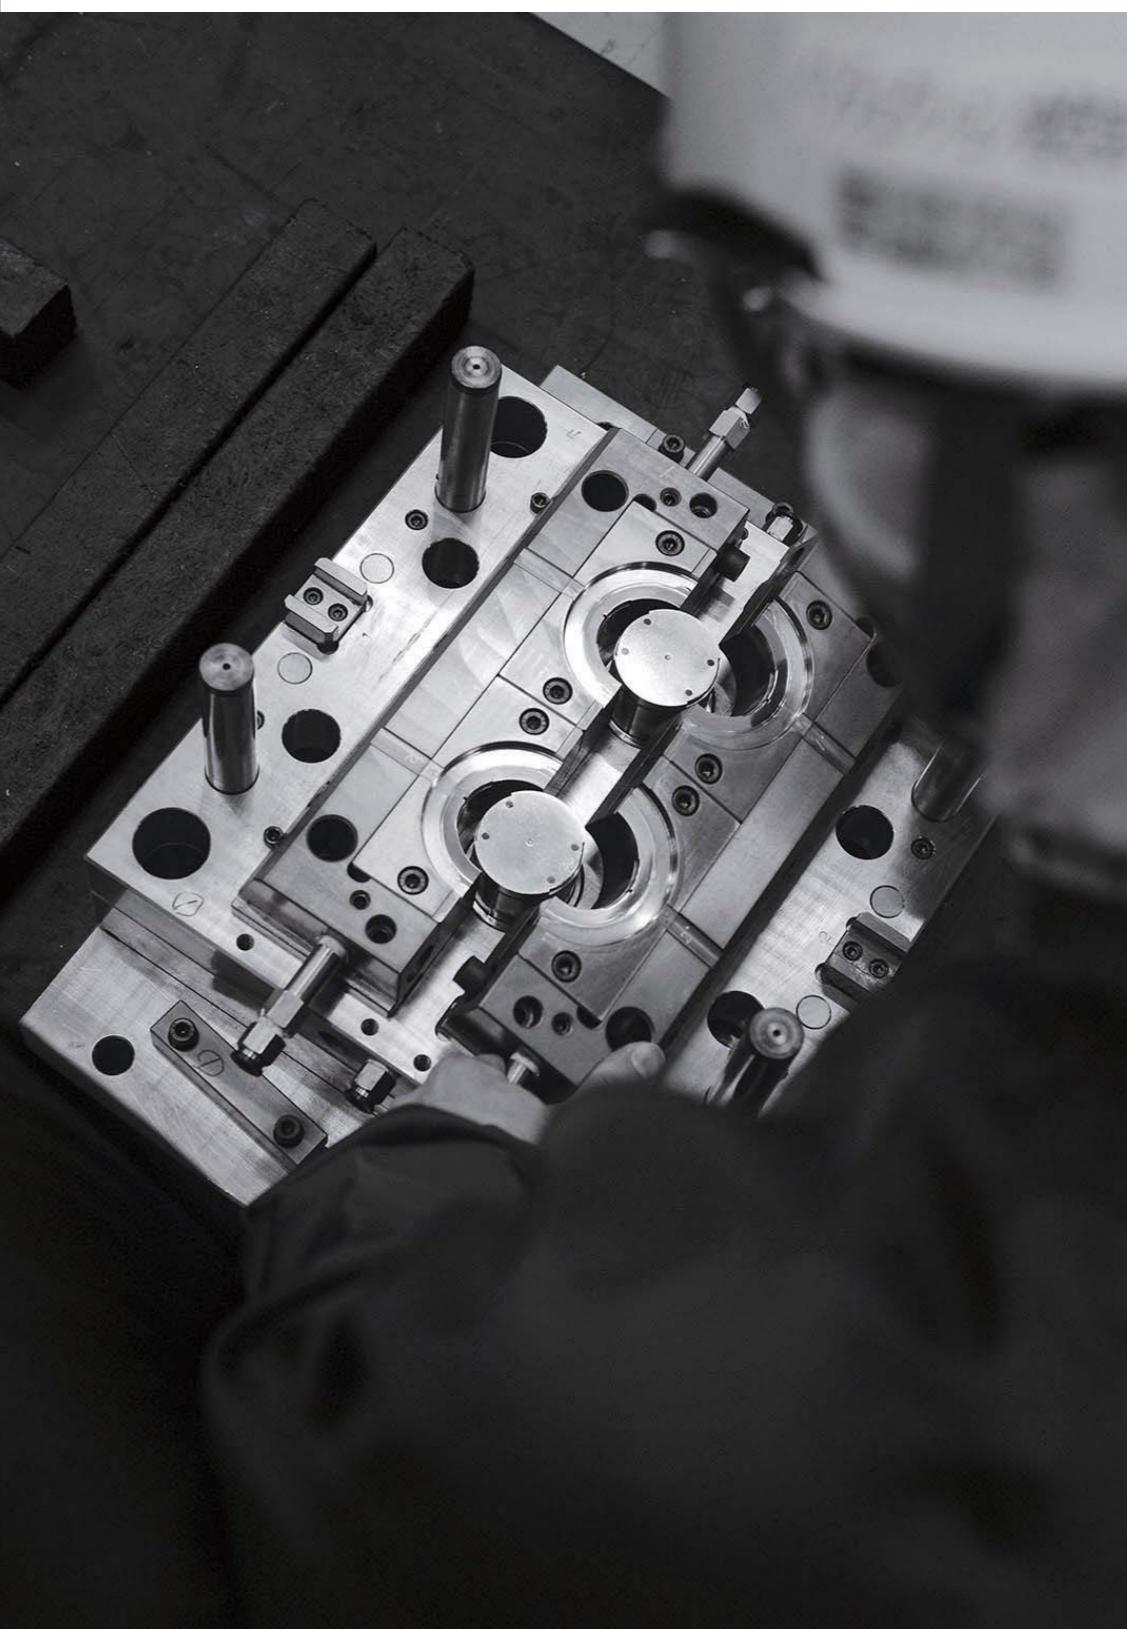

If there's something new happening in container design, mold development, materials science, manufacturing technology or logistics, chances are we're right there at the leading edge. Our continuous research and development in barrier properties, product safety and functional design is providing new value for our customers and a better experience for end users.

In this business there's no substitute for experience and after more than 65 years we have plenty.

If you have a problem, chances are we have a solution. Our leadership in manufacturing processes and mold development makes it possible to meet almost any packaging need, whether sourcing a standard container or creating a new package design. Getting the business of packaging right is where the Takemoto solution really shines.

Every customer's brand is unique. We make sure your package is too.

We support customers at every step of the four stage process to bring a product to market:

1. Concept

The consulting and planning process is where we learn about the customer's product idea and advise on the best way to develop a successful package.

2. Container

We work with customers to select a base container design or create a bespoke package design that is beautiful and eye-catching while matching product characteristics and the end user's functional requirements.

3. Customisation

Start with a basic standard bottle shape and end up with a customised container suited to your specialized requirements. Our huge selection of caps, dispensers and accessories along with our vast range of coloring, printing and labeling processes make the package design possibilities practically endless.

4. Time & Quantity

A great package is no guarantee of success if it doesn't make business sense. A winning product has to go to market on time, on budget and in the quantity that fits the business plan. With that in mind, we've developed manufacturing and delivery systems that are extraordinarily fast, flexible, efficient and customer-focused.

A Sustainable Business

Our mission is to provide our customers with container packaging components that ensure safe storage and packing of their products, enhancing those products' value and individuality while enriching the lives of end users. To continue fulfilling that mission into the future, it is increasingly important that we consider the impact of our products on the environment. Takemoto is committed to working towards a more sustainable container culture.

Materials

We are constantly researching the use of sustainable materials for our containers. Our use of non-petroleum-based bio-mass plastics, derived from sugarcane by-products, helps reduce petroleum consumption without competing with food production for resources. In addition to more environmentally friendly plastics such as biodegradables, we employ alternative materials such as glass, metal and even paper.

Recycling

Recycling is a top priority. We are actively pursuing new ways to increase the use of recycled materials, including PET and PP, in our containers. This helps make meaningful use of the plastics carefully separated and recycled by consumers. At the same time, we are developing containers that can be used repeatedly rather than be discarded after a single use.

Innovation

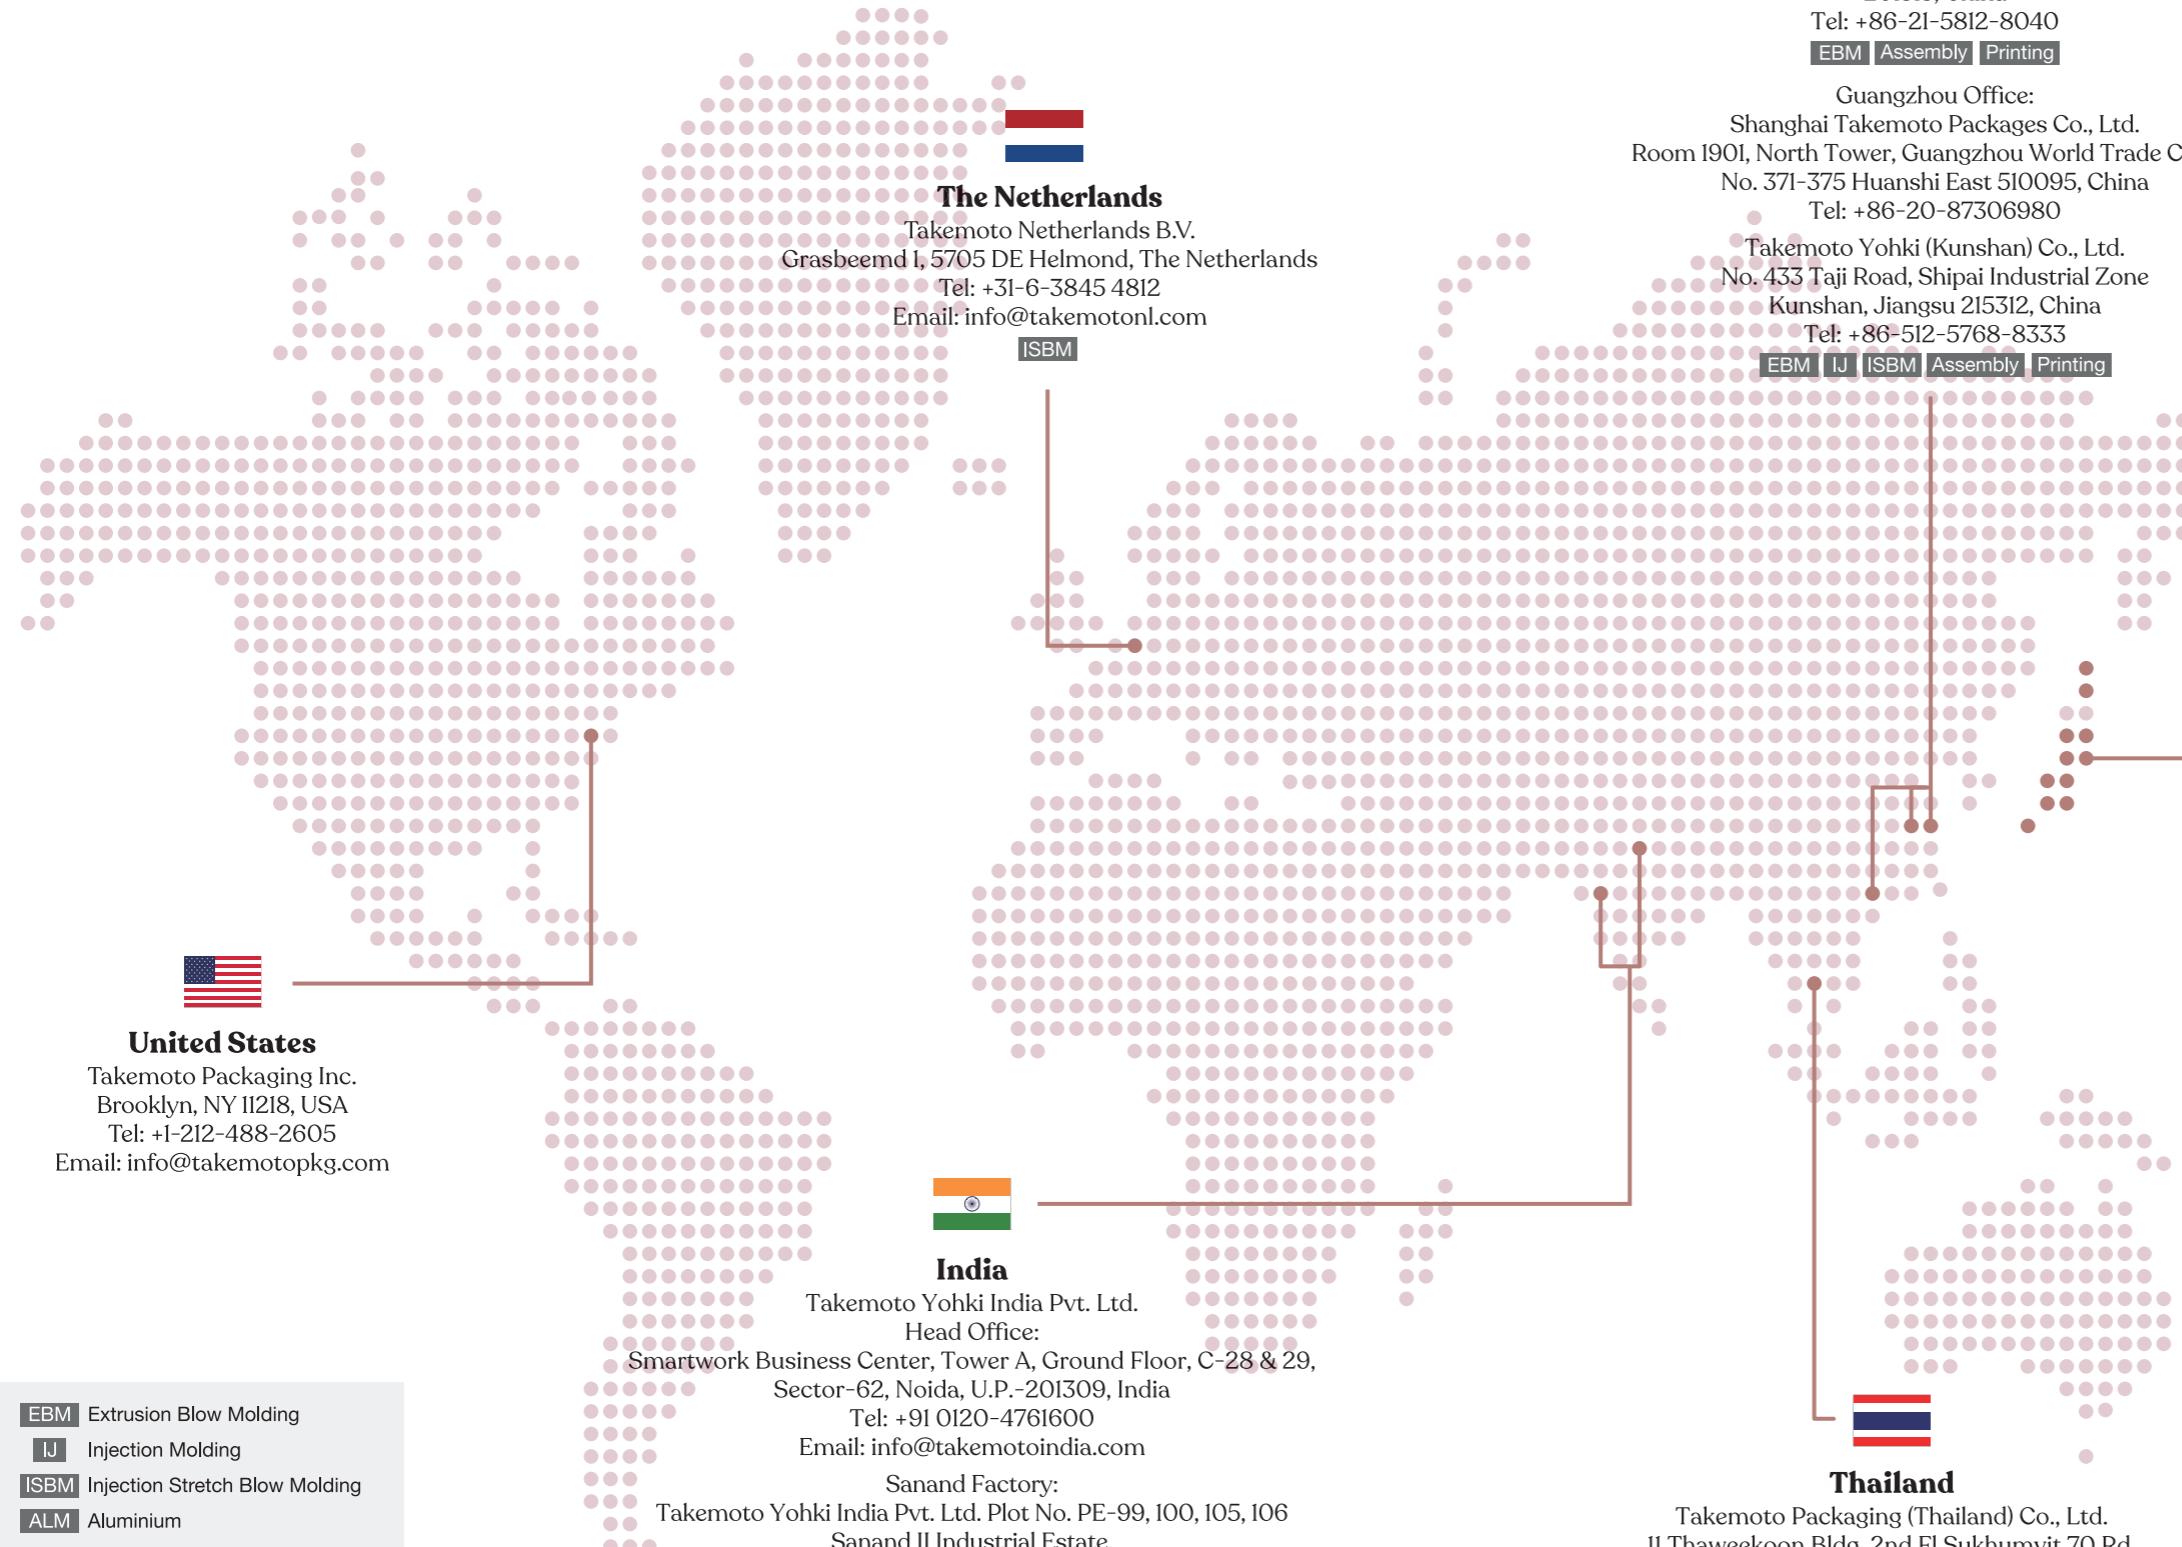

In recent years we have focused our research and development on innovative ways to enhance our products' sustainability. We are working on new coating technologies that improve the barrier properties of our containers without compromising recyclability. Recycling is further enhanced by our development of new mono-material containers and thin-walled products. We have also developed alternative raw materials and special additives to our plastic resins to create containers that produce lower CO₂ emissions when incinerated.

Availability may vary by region. Please consult your local Takemoto representative for details.

Takemoto offers a huge line-up of caps & accessories. Customise functional characteristics by selecting from our line of caps, nozzles, sprays, pumps and accessories. Each of these is compatible with a wide range of basic containers. Our exclusive range of features includes security components such as childproof caps, easy-open lids and nozzles, high-viscosity dispensing systems that minimize left-over waste, special-use sprays and pumps, and product-preservation systems such as ALD oxygen barrier bottles

By our reckoning, Takemoto owns more molds than any other packaging company in the world and we add hundreds of new molds each year. The following pages illustrate part of our Standard offer which today includes 1,905 components and 870 closures.

The ideal package begins with the right component. We have over 50,000 possible packages and counting...

Endless Possibilities

The final stage in creating a complete container package is printing and labeling. We offer, in-house and with partners, a multitude of methods and processes.

Silk Screening

Embossed Printing

Matte Decoration

Frosting

Shrink Wrap

Ink-Jet Printing

User's Guide

User's guide – to readers of this catalogue –

Resin Characteristics

- ▶ HDPE (High-density polyethylene) Superior resistance to chemicals and moisture. Reasonable cost. Widely used all-purpose resin.
- ▶ LDPE (Low-density polyethylene) Squeezable. Superior gloss and translucency compared to HDPE. Inferior chemical resistance.
- ▶ PET (Polyethylene terephthalate) Glass-like transparency with superior gas barrier properties and chemical resistance. Recyclable. Physical properties such as heat and drop-resistance may differ depending on molding technique (Extrusion-blown molding or injection-blown molding)
- ▶ PP (Polypropylene) Physical properties are similar to HDPE but with superior heat-resistance. Inferior resistance to cold.
- ▶ PS (Polystyrene) Colorless and odorless with superior transparency. Inferior resistance to shock, chemicals and oil.
- ▶ AS (Acrylonitrile styrene) Superior resistance to dropping, chemicals and oil compared to PS and suitable for precise molding. Raw material is more costly than PS.
- ▶ PVC (Polyvinyl chloride) Superior chemical resistance and transparency. Has resistance to flame but low resistance to heat and cold.
- ▶ GLASS (Soda-lime-glass) Superior gas barrier properties and chemical resistance but inferior drop-resistance.

Resin \ Characteristic	Transparency	Luster	Alkali resistance	Acid resistance	Alcohol resistance	Oil resistance	Water vapor permeability	Oxygen permeability	Carbon dioxide permeability	Aroma permeability	Heat resistance
HDPE	×	×	○	○	△	△	○	△	×	×	80~100°C
LDPE	△	△	○	○	△	×	△	×	×	×	70~100°C
PET	○	○	△	△	○	○	△	○	○	○	50~60°C
PP	△	△	○	○	○	○	○	△	×	×	90~110°C
PS	○	○	○	○	×	×	×	×	×	×	60~80°C
AS	○	○	○	○	×	○	×	△	△	△	50°C
PVC	○	○	○	○	○	○	△	○	○	△	60~70°C

- The data in the table is for reference only. Adequate sample testing should be conducted to verify compatibility based on all conditions of use.
- Regarding permeability, materials with a ○ symbol indicate a lower permeability value.
- Please contact us for more detailed information.

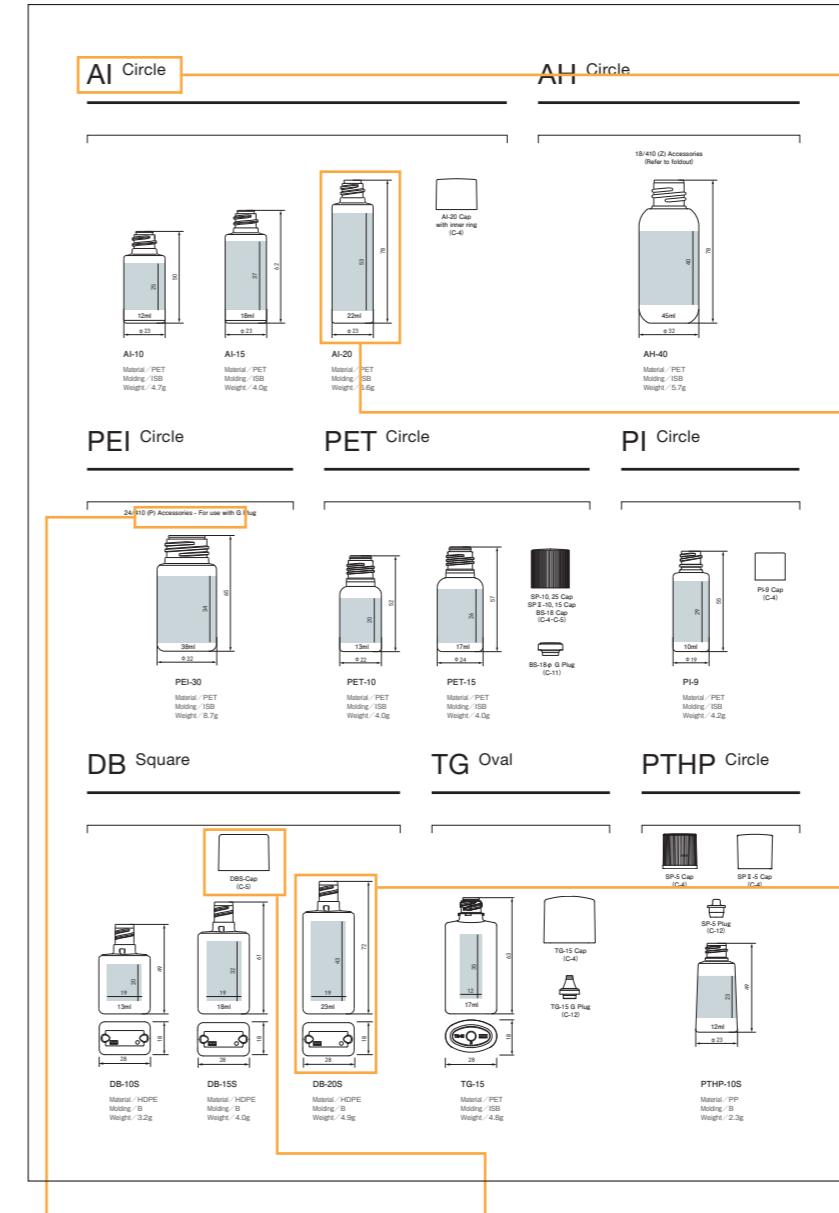

Notes regarding usage

- ◇ Key to molding processes on product pages: B (Extrusion-blown molding), I (Injection), ISB (Injection-stretch-blown molding)
- ◇ Depending on contents and conditions of use, cases of transformation of materials and so on may occur with the passage of time. Be sure to conduct adequate usage testing.
- ◇ Please confirm compatibility of liners in regard to products and contents.
- ◇ Product specifications are included as a reference, however slight differences may occur with actual products.
- Filling capacities may be affected by printing, coloring, effervescent products, weight etc. Please conduct filling tests etc. with samples to confirm.
- ◇ Please be aware that depending on materials, forms and capacities, dropping may result in damage or caps becoming detached.
- ◇ Please refrain from using accessories not approved for use by Takemoto.
- ◇ Depending on the circumstances, individual standards and specifications may be subject to change.
- ◇ Reproduction or duplication, in part or whole, of this catalogue is strictly prohibited.

- Notes • The manufactured products included in this catalogue consist of both items kept on inventory and those made to order.
- Goods kept on inventory can be shipped in case quantities. Production of made-to-order goods shall commence after orders have been received.
 - Coloring of containers, caps as well as decoration is possible in small order quantities.

How to use this catalogue

Using the following as a reference, please select the most suitable container to meet your needs.

Accessory information

Compatible accessories and plugs are shown.
Please refer to the foldout guide for details.

Accessories

An image, the name and reference page of compatible accessories are indicated.
Please make a selection according to your needs.

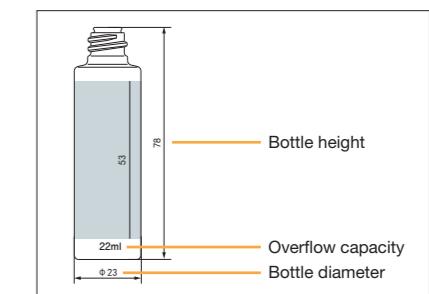

Series name and shape

The figure beside the series name indicates whether the shape of the base is circular, square or oval

Circle	Square	Oval
Cylindrical bottle	Square bottle	Oval bottle

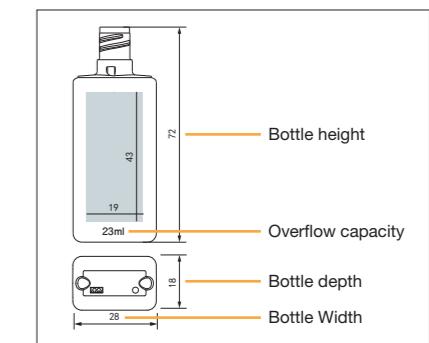

Bottle size (Cylindrical)

Height, capacity and diameter are shown for cylindrical bottles. Diagrams showing the base as square and oval bottles are not included.

Bottle size (Square, Oval)

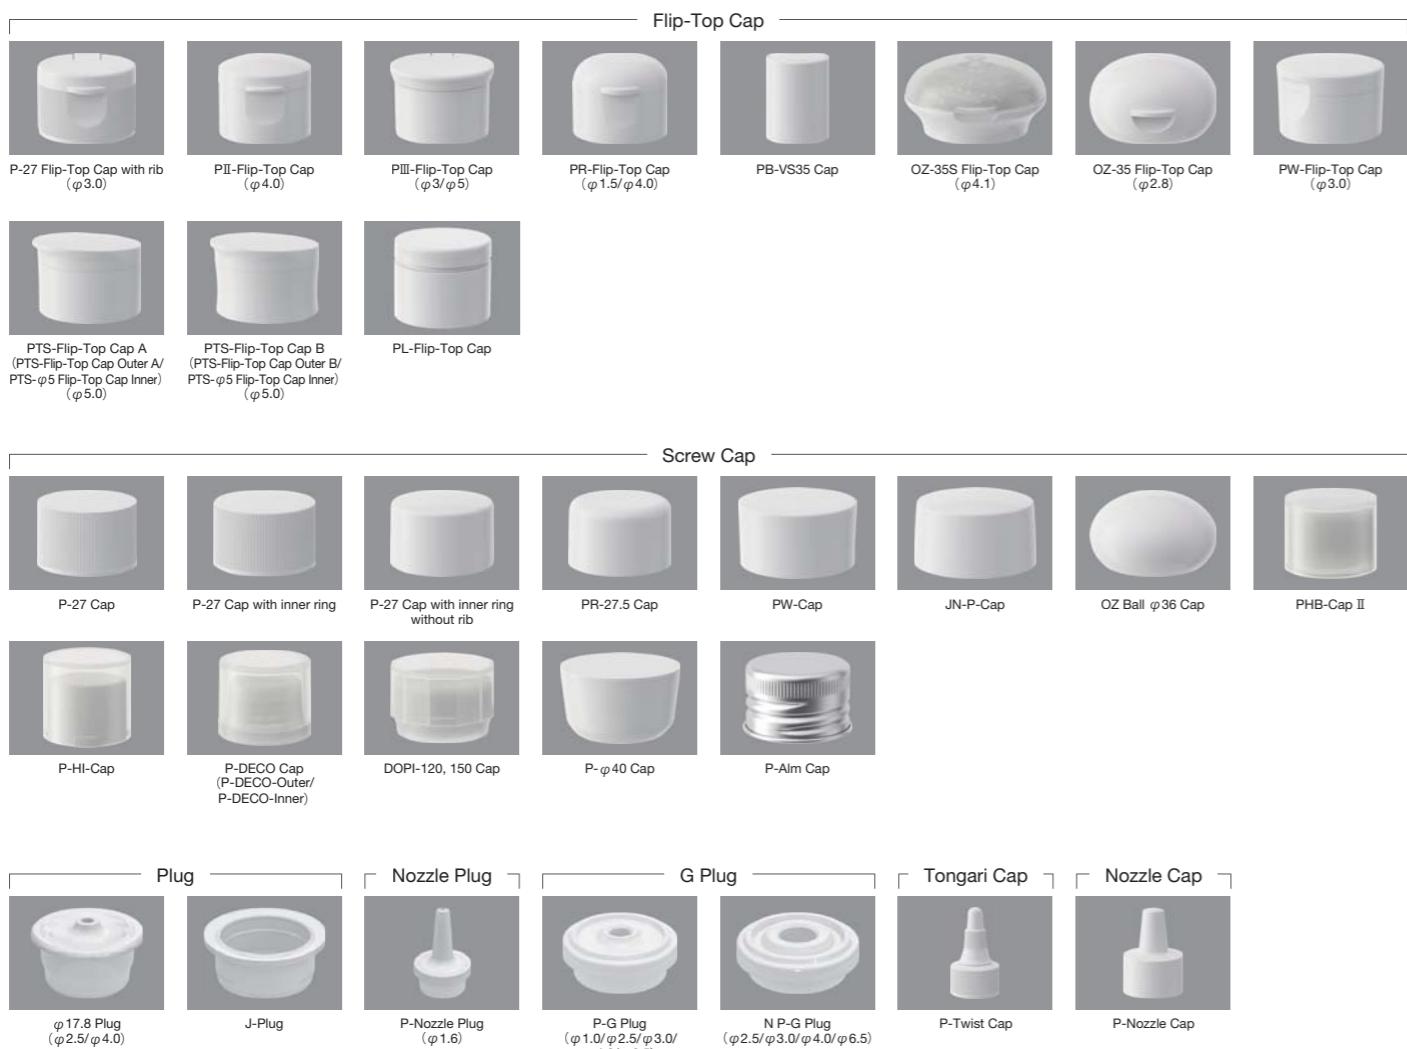

For square and oval bottles, in addition to height and capacity, the shape of the base and its dimensions are indicated.

24/410(P),18/410(Z), 20/410(PPS), 33/410(Y), 28/410(M) Cap list

24/410 (P) Series Cap

* Note : May not be compatible will all 24/410 (P) Series containers. Please confirm prior to use.

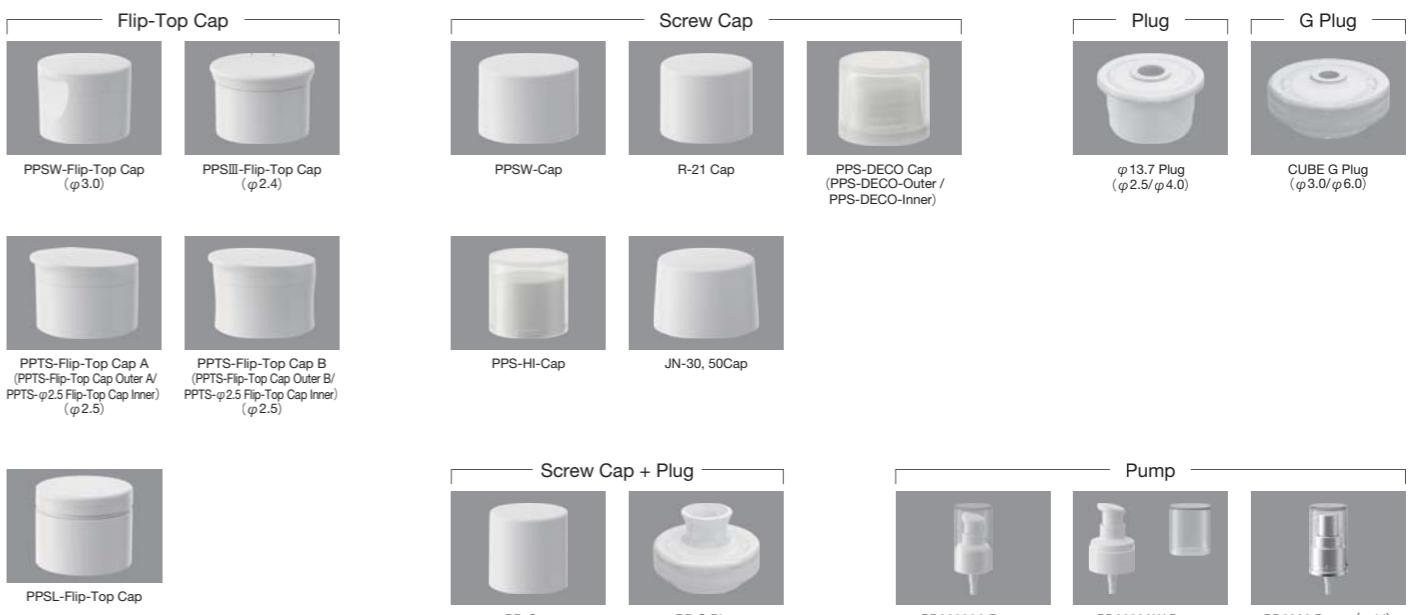

18/410 (Z) Series Cap

* Note : May not be compatible will all 18/410 (Z) Series containers. Please confirm prior to use.

20/410 (PPS) Series Cap

* Note : May not be compatible will all 20/410 (PPS) Series containers. Please confirm prior to use.

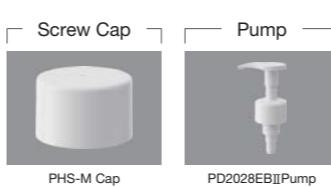

33/410 (Y) Series Cap

* Note : May not be compatible will all 33/410 (Y) Series containers. Please confirm prior to use.

28/410 (M) Series Cap

* Note : May not be compatible will all 28/410 (M) Series containers. Please confirm prior to use.
